

Homeless Shelter Website

- **Bootstrap components:**

1. Forms. I used bootstrap form component for making the checkout billing information.

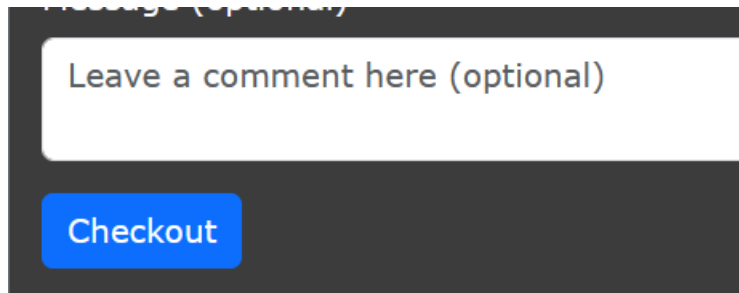

A screenshot of a Bootstrap form titled "Billing Information". The form is set against a dark background with light-colored input fields. It contains the following fields: "First Name *" and "Last Name *" (both with "aa" entered), "City *" (with "aa" entered), "Billing Address *" (with "aa" entered), "Country *" (a dropdown menu showing "Austria"), and "ZIP Code *" (with "44" entered). There are also optional fields for "Phone Number (optional)" and "Message (optional)". At the bottom of the form is a blue "Checkout" button.

example:

```
<div class="col-lg col-md col-xl col-xxl mt-sm-3 mt-3">
  <label for="lastname" class="form-label">Last Name *</label>
  <input maxlength="40" pattern="[A-Za-z]+" required type="text" id="lastname"
    class="form-control" placeholder="Please enter letters only">
</div>
```

2. Buttons. I used btn for the form submit button.

A screenshot showing a portion of the form. It features a text input field with the placeholder text "Leave a comment here (optional)". Below this field is a blue "Checkout" button.

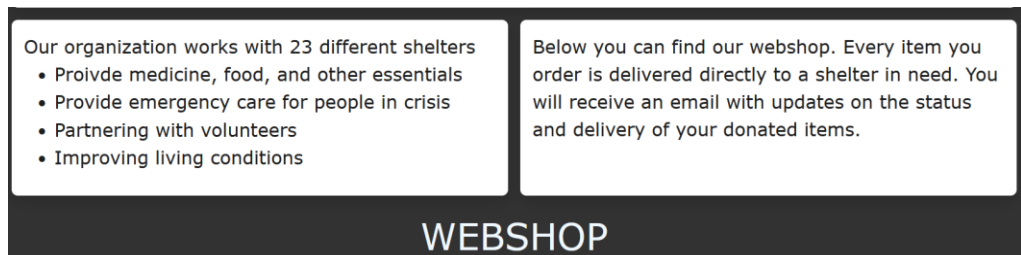

```
<div class="p-2">
  <button type="submit" class="btn btn-primary">Checkout</button>
</div>
```

3. Cards. It has been custom made by me, but the foundation is the same.

```
<div onclick="addToShoppingList('RegularHygieneKit')" class="col p-3">
  <div class="bg-darkgray text-white item-object">
    
    <div class="p-1">
      <span class="fs-6 d-block text-white">Regular Hygiene Kit</span>
      <span class="text-yellow">€7.99</span>
    </div>
  </div>
</div>
```

4. Typography. For different font sizes and colors.

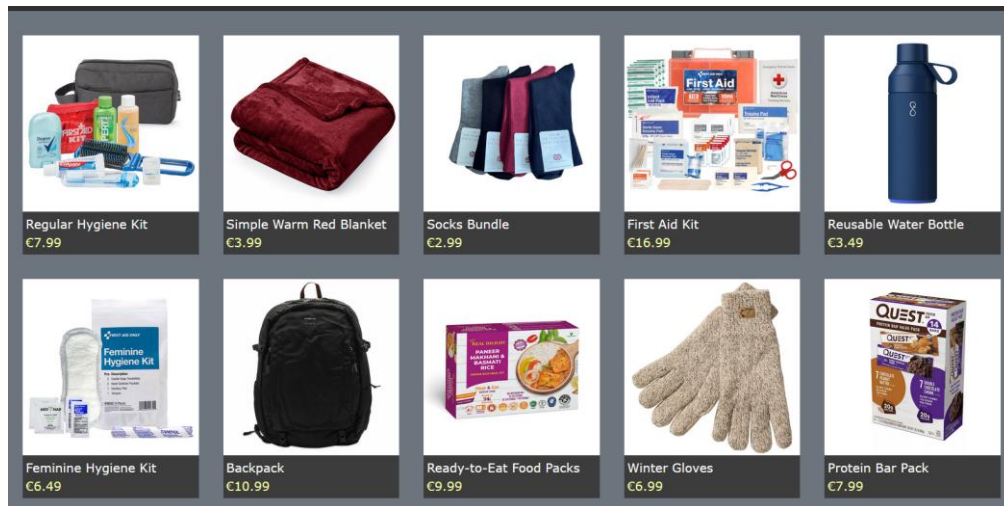

```
<article class="col-lg fs-4 p-3 text_article">Our organization's main goal is to provide essential items to homeless shelters with limited resources and insufficient equipment to properly care for their occupants. We act as a bridge between citizens and homeless shelters: the equipment ordered through our platform is delivered directly by us to the shelters in need. We believe every person deserves proper care, comfort, and support.</article>
<figure class="col-lg m-0 p-3">
```

5. Random bootstrap utilities (w-100, rounded-3, p-1, mt-5, d-block)

```
<div onclick="addToShoppingList('FoodPack')" class="col p-3">
  <div class="bg-darkgray text-white item-object">
    
    <div class="p-1">
      <span class="fs-6 d-block text-white">Ready-to-Eat Food Packs</span>
      <span class="text-yellow">€9.99</span>
    </div>
  </div>
</div>
```

Grid system. I used grid for almost all elements in this webpage. The website introduction is made by grid, the webshop cards, and also the form inputs.

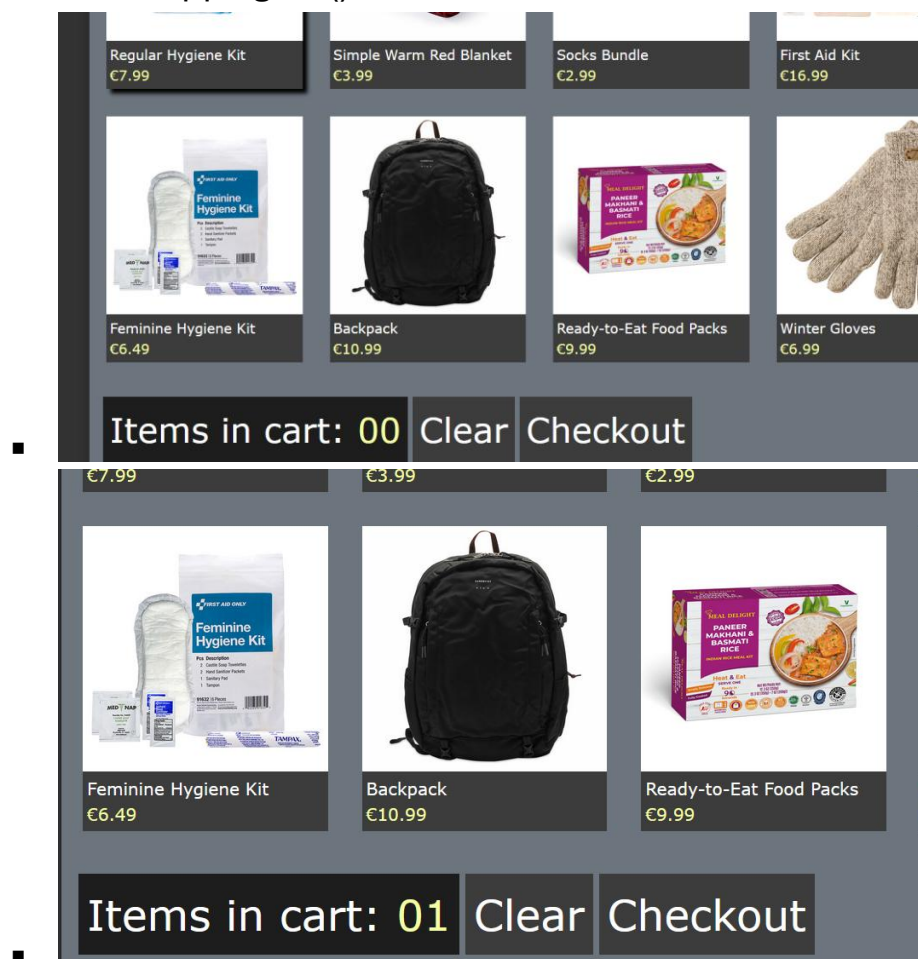

```
<main class="container mt-3 p-3 border border-dark border-1 shadow bg-secondary">

  <div class="row row-cols-xl-5 row-cols-xxl-5 row-cols-lg-5 row-cols-md-4 row-cols-sm-3 row-cols-2">

    <div onclick="addToShoppingList('RegularHygieneKit')" class="col p-3">
      <div class="bg-dark text-white item-object">
```

- **Javascript**

1. `addToShoppingList()` function: It puts shopping item in an Array with a specific string parameter. `updateCounter()` is called with the `addToShoppingList()` function

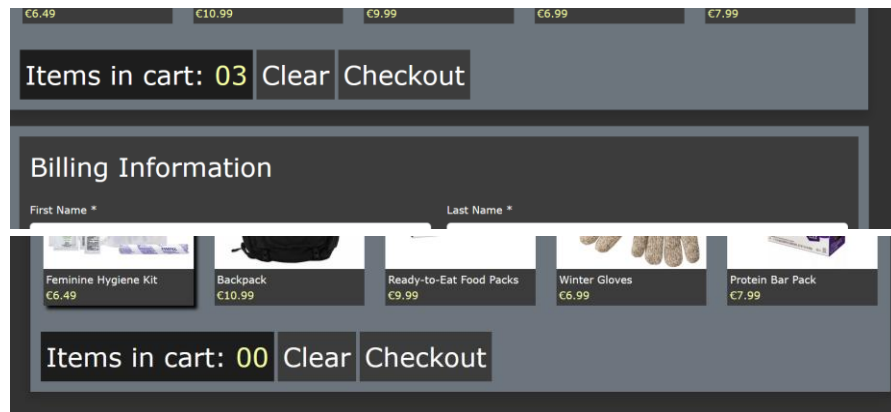

2. `continueToDetails()` function: if `array.length > 0`, then the form appears

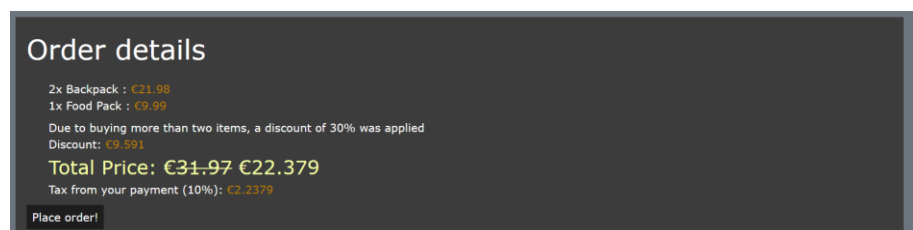

A screenshot of a 'Billing Information' form. It contains several input fields: 'First Name *' with 'aa', 'Last Name *' with 'aa', 'City *' with 'aa', 'Billing Address *' with 'aa', 'Country *' with a dropdown menu showing 'Austria', and 'ZIP Code *' with '44'. There are also optional fields for 'Phone Number (optional)' and 'Message (optional)'. A 'Checkout' button is at the bottom.

3. `clearArray()` function (additional): It clears the Arrays and closes the checkout window and form window

A screenshot showing a shopping cart and a 'Billing Information' form. The cart at the top lists items with prices: €6.49, €10.99, €9.99, €6.99, and €7.99. Below the cart, the 'Billing Information' form is visible, with 'Items in cart: 03' and 'Clear' and 'Checkout' buttons. Below the form, a list of items is shown: 'Feminine Hygiene Kit' (€6.49), 'Backpack' (€10.99), 'Ready-to-Eat Food Packs' (€9.99), 'Winter Gloves' (€6.99), and 'Protein Bar Pack' (€7.99). At the bottom, 'Items in cart: 00' is shown with 'Clear' and 'Checkout' buttons.

4. `checkout()` function: it shows the checkout window and prices if the correct information was put into the forms. The form will not let you continue further unless every information is correctly filled in.

A screenshot of an 'Order details' screen. It shows a list of items: '2x Backpack : €21.98' and '1x Food Pack : €9.99'. Below this, it states 'Due to buying more than two items, a discount of 30% was applied' and 'Discount: €9.591'. The 'Total Price' is shown as '€31.97' and '€22.379'. At the bottom, it says 'Tax from your payment (10%): €2.2379' and has a 'Place order!' button.

5. `placeOrder()`: If „place order” button was pressed, then window alert pops up about confirming the order. If order was accepted, another thank you alert pops up, and the website refreshes.
